At first, I didn't struggle much with creating the content because we were told beforehand what the different HTML tags are, or at least the basics. I started having trouble designing the webpage. I'll admit that I barely know CSS, so I had to search for how to make what I envisioned in my head appear on my webpage. It was frustrating debugging the problems, but so satisfying and fun to see them actually work in the end. It was so much fun to learn about many attributes and how to separate them into a separate CSS file, so it's easier for me to design multiple elements. I really like designing stuff like drawing random digital art. So this activity really helped me explore more tidbits of both CSS and HTML, although I know I have a long way to go to make my webpage look cooler. Looking forward to learning more about web development! I'm still torn between web development and network security for my future specialization.
